## Before You Begin

The 1732E-8X8M12DR EtherNet/IP™ ArmorBlock® I/O module is a 24V DC module that communicates via EtherNet/IP. The sealed IP65, IP67, and IP69K housing of these modules requires no enclosure. I/O connectors are sealed M12 style.

EtherNet/IP networks use advanced network technology, for example, producer/consumer communication, to increase network functionality and throughput.

See [Figure 1 on page 4](#) to familiarize yourself with major parts of the module.

**Figure 1 - Module Identification****Component Description**

2	Functional Earth <sup>(1)</sup>	6	Protective Earth <sup>(2)</sup>
3	EtherNet/IP D-Code M12 connector	7	Auxiliary power

- (1) Functional Earth grounds the I/O block's EtherNet/IP communication circuitry which is designed to mitigate the effect of noise on the network. See [EtherNet/IP Connector on page 6](#).  
(2) Protective Earth is provided for the grounding of field devices and is internally connected to each Pin 5 of the M12 I/O connectors. See [I/O Connectors on page 6](#).

**Catalog Number Explanation**

Catalog Number	Description	Network Connector	Auxiliary Power
1732E-8X8M12DR	Diagnostic 8-Input/8-Output 24V DC Digital I/O Dual-Port EtherNet Module	Dual D-code M12	Single 4-pin mini

**Install the Module**

To install the module:

- Set the network address
- Mount the module
- Connect the I/O, Network and Auxiliary cables to the module.

**Set the Network Address**

The I/O block ships with the rotary switches set to 999 and DHCP enabled.

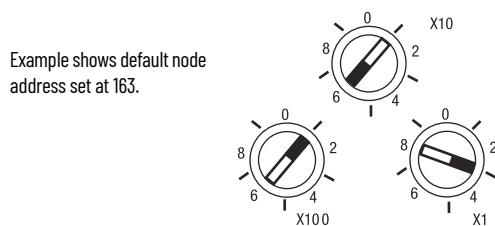

To change the network address, you can do one of the following:

- Adjust the switch on the front of the module.
- Use a Dynamic Host Configuration Protocol (DHCP) server, such as Rockwell Automation® BootP/DHCP.
- Retrieve the IP address from nonvolatile memory.

The I/O block reads the switches first to determine if the switches are set to a valid number. To set the network address:

1. Rotate the three (3) switches on the front of the module using a small blade screwdriver.
2. Line up the small notch on the switch with the number setting you wish to use.
3. Valid settings range from 001...254.
4. Cycle power.

## Set Network Address

When the switches are set to a valid number, the I/O block's IP address is 192.168.1.xxx (where xxx represents the number set on the switches). The I/O block's subnet mask is 255.255.255.0 and the gateway address is set to 0.0.0.0. When the I/O block uses the network address set on the switches, the I/O block does not have a host name assigned to it or use any Domain Name Server.

If the switches are set to an invalid number (for example, 000 or a value greater than 254 excluding 888), the I/O block checks to see if DHCP is enabled. If DHCP is enabled, the I/O block asks for an address from a DHCP server. The DHCP server also assigns other Transport Control Protocol (TCP) parameters.

If DHCP is not enabled, the I/O block uses the IP address (along with other TCP configurable parameters) stored in nonvolatile memory.

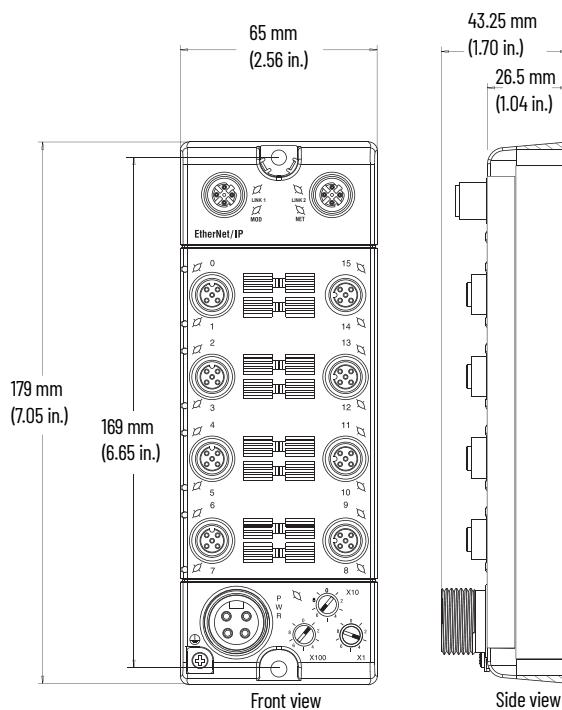

## Mount the Module

Two sets of mounting holes are used to mount the module directly to a panel or machine. Mounting holes accommodate #8 (M4) pan head screws. The torque specification is 1.13 N·m (10 lb·in).

## Product Dimensions

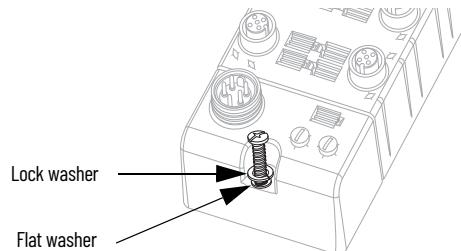

See [Figure 2](#) for the mounting dimensions illustration to help you mount the module.

**Figure 2 - Module Dimensions**

## Mount the Module in High Vibration Areas

If you mount the module in an area that is subject to shock or vibration, we recommend you use a flat and a lock washer to mount the module. Mount the flat and the lock washer as shown in the mounting illustration. Torque the mounting screws to 1.13 N·m (10 in·lb).

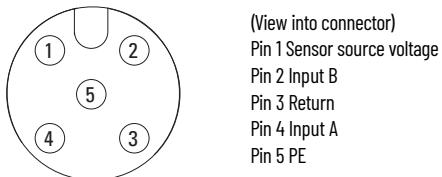

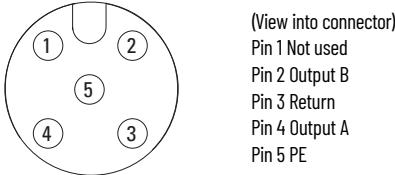

**Figure 3 - High Vibration Area Mounting**

## Connect the I/O, Network and Auxiliary Cables to the Module

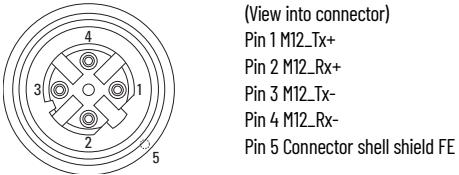

The ArmorBlock EtherNet/IP family has 5-pin micro-style connectors. We provide caps to cover the unused connectors on your module. Connect the quick-disconnect cord sets you selected for your module to the appropriate ports.

### I/O Connectors

See the pinout diagrams for the I/O connectors.

**Figure 4 - Micro-style 5-pin input Female Connector****Figure 5 - Micro-style 5-pin Output Female Connector**

### EtherNet/IP Connector

**Figure 6 - D-Code Micro Network Female Connector**

**ATTENTION:** Make sure all connectors and caps are securely tightened to properly seal the connections against leaks and maintain IP enclosure requirements.

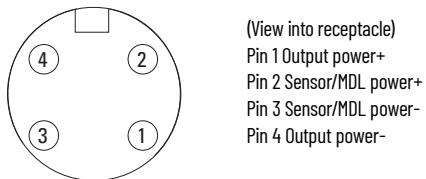

**IMPORTANT** Use the 1585D-M4DC-H: Polyamide small body unshielded or the 1585D-M4DC-SH: Zinc die-cast large body shielded mating connectors for the D-Code M12 female network connector. Use two twisted pair CAT5E UTP or STP cables.

D-Code M12 Pin	Wire Color	Signal	8-way Modular RJ45 Pin
1	White-Orange	TX+	1
2	White-Green	RX+	3
3	Orange	TX-	2
4	Green	RX-	6

## Auxiliary Power Connector

Attach the mini-style 4-pin connector to the mini-style 4-pin receptacle as shown in [Figure 7](#).

**Figure 7 - Mini-style 4-pin Input Male Receptacle**

Auxiliary Power is based on a 4-pin connector system and is used to provide 24V DC power to I/O modules and other devices. Running separate power to these devices is most typically used for I/O devices with output connections to prevent power supply interruption due to switching of outputs. However, some devices require separate auxiliary power to power them regardless of the presence of outputs.

Depending on the devices used, it may be possible to provide power through only one pair of the four available pins, and in this case the other available pair may be used for single channel E-stop through the use of special E-stop drop or power T-ports and shorting plugs. Allen-Bradley® E-stop T-ports and shorting plugs are red in color for easy identification.

**ATTENTION:** To comply with the CE Low Voltage Directive (LVD), this equipment and all connected I/O must be powered from a source compliant with the following:  
Safety Extra Low Voltage (SELV) or Protected Extra Low Voltage (PELV).

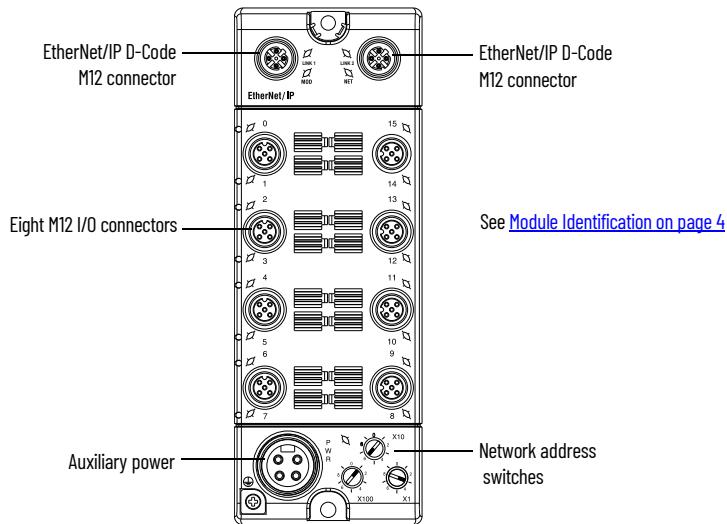

**ATTENTION:** To comply with UL restrictions, this equipment must be powered from a source compliant with the following: Limited Voltage/Current.

## Configure the Module

See [Figure 8](#) for configuration operations.

**Figure 8 - Configure Operations**

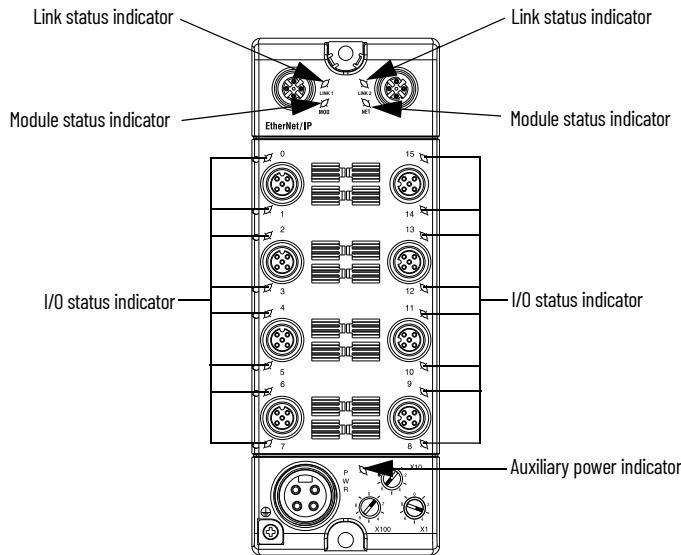

See Essential Components Selection Guide, publication [EC-CA100](#), for Rockwell Automation cable and cord set offerings or use the configuration tools available at [rok.auto/systemtools](#).
